MicroNFT

What is Micronft?

Micronft is a software and program with Smart NFt generation technology. All
license rights and patents belong to Updatenet.
Micronft has been created for the Digital currency market with Inspiring enhancements
and updates on designing digital art.

Is it possible to bring any digital art image to an nft of your choice if you want? yes Can the program
prepared for the digital art environment produced by Micronft be an alternative option that can be
used by everyone? Digital art pictures are not separated separately, do the created pictures always
give the same results as a result of modeling, or can they create an nft collection for everyone, can
these numbers reveal different results for more than 2 billion computer users?

Can Micronft be designed, updated and re-expanded into a larger
program? Answer: Yes Micronft is a video card software. With better
modeling of graphics cards and new technologies added, it can produce
unique and new digital art images. This program completely uses its
own imagination. It is like the first computer in the hands of the developer towards becoming a
better Painter in the future. The launched program can be strengthened with examples such as
advanced virtual video, location algorithm, nature, animal, anime, illustration, illustrator, for unique
pictures and updated technologies for each user. It is completely free in its own time algorithm as
well as personal findings.

Definition of NFT according to Wikipedia:

Qualified Intellectual Property[1], or non-fungible token (NFT for short) as it is popularly known in
English, is a unit of data stored in a digital ledger called a blockchain, which confirms that a digital
asset is unique and therefore not interchangeable.[2] NFTs can be associated with reproducible digital
files such as photos, videos and audio.

However, access to any copy of the original file is not limited to the recipient of the NFS.
While copies of these digital items are available for anyone to acquire, NFTs are
tracked on blockchains to provide the owner with proof of ownership separate from the copyright.

In 2021, interest in using NFT has increased.
Blockchains like Ethereum, Flow, and Tezos have their own standards for supporting NFTs, but
each works to ensure that the digital item represented is uniquely unique.

NFTs are now used to commodify digital assets in art, music, sports and other popular
entertainment. Most NFTs are part of the Ethereum blockchain; however, other blockchains
may implement their own versions of NFT.[3]

NFT's market capitalization tripled in 2020 to over $250 million.
[4] The rise of NFT transactions has led to increased environmental criticism.
Computationally heavy processes associated with proof-of-work blockchains, the type primarily used
for NFTs, require high energy inputs that increase global warming.

The carbon emissions generated by the energy needed to sustain these blockchains have
forced some in the NFT market to rethink their carbon footprint.

Description According to
Wikipedia: NFT is a unit of data stored in a digital ledger called the blockchain, which confirms that any
digital file is unique.
An NFT functions like a cryptographic token, but unlike cryptocurrencies like Bitcoin, it is not mutually
interchangeable, in other words, it is not interchangeable.

NFTs create cryptographic hash sequence records, a set of characters that verify that a dataset is unique, when it strings into previous records, thus creating a chain of identifiable data blocks.

This cryptographic transaction process ensures the authentication of each digital file by providing a digital signature that is used to track the ownership of the NFT.

However, data links pointing to details like where the art is stored can die.

Also, ownership of an NFT does not inherently copyright any digital assets the token represents.

While an individual may sell an NFT representing their work, the
 buyer will not receive copyright privileges when ownership of the NFT changes. and
 therefore the original owner is allowed to create more NFTs of the same work.
[10][11] In this sense, an NFT is merely a proof of ownership separate from the copyright.

Usage:

NFTs of artworks are similar to signed items.

The unique identity and ownership of an NFT can be verified with the blockchain ledger.

NFTs have metadata processed via a cryptographic hash function.

In other words, you can put your own produced NFTs for sale in any amount in a market.
.
If you want, you can Sell Digital Pictures Made by MicroNFT as NFT.
MicroNFT is a Painter's Friend. free
inspiration.

According to the information provided by Wikipedia, Digital art:

Digital art was an early use case for NFTs due to the ability of blockchain technology to secure the unique signature and ownership of NFTs.

Artist Mike Winkelmann, also known as Beeple, In digital artwork "Everydays - The First 5000 Days" sold for US$69.3 million in 2021.[17][18] The purchase resulted in the third highest auction price for a living artist after Jeff Koons and David Hockney Den.

Figma CEO Dylan Field sold a digital avatar called "CryptoPunk #7804" for $7.5 million to an unnamed investor in February 2021, as well as a second avatar "Ape, Fedora #6965" for $1.5 million .[21]

A 3D rendered model of a house called "Mars House" created by artist Krista Kim has sold as a piece of digital real estate on the NFT market for over US$500,000. In 2021, a digital portrait of the Fyre Media logo, by rapper Ja Rule,

It was sold at an auction for US$122,000 through NFT
startup "Flip Kick", a marketplace for digital art.
Created by artist Trevor Andrew, the artwork "Gucci Ghost" was sold on the NFT
market in February 2021 as an NFT in the form of a flickering ghost-GIF for US$3,600.

In December 2020, an NFT painting depicting the seasons inside a series of vertically ascending chambers
sold for US$22,938. The artwork was created by artist Blake Kathryn.

MicroNFT is Technologically Imagination Friendly.
It proves that both humans and machines do not work with the same imagination. The Unique Imagination
of Mankind Is Different for Every Person.
MicroNFT Quotes From Nobody's Imagination.
Since biointelligence models designed for machines vary with
mathematical calculations of mi tritons per second. shows that the
fictions that people think are not the same.
Sometimes they can be the same if MicroNFT wants to extract a picture for everyone.
because the forms that any object can transform into are certain.
So Geometry is not Infinite. it only
shows shape, can change shape, and its shape cannot be defined as unlimited. Only
MicroNft reveals Inspired Digital Images within certain geometry capsules .

System for
Uptadenet Energy Energy for the System .

With MicroNFT, you can also draw your own imagined pictures, if you wish, you can make your Digital
Pictures for a Metaverse universe.
Full of awareness and privileges, MicroNFT is completely User-friendly, and does not generate any viruses.

MicroNFT Digital Currency:

A-MicroNft token is a Digital currency of Micronft software B-Marketplace
buys wallet after purchase, digital currency is burned with the tax of
the digital currency it gives.
Pursuant to the C-user provisions, it can be traded on the Free Exchange in order to keep the Micro
NFT.
D-legal entities can be published on corporate digital currency exchanges, trading prices on
digital currency exchanges may vary.

The e-reasonable price index depends on the global stock market, its depreciation or appreciation
results   ,
Investors can make a profit or a loss. This
responsibility belongs to the investor.

If any summarized version of the F-Software is published by other companies as a product of the software, uptadenet may file an international lawsuit for direct copyrights.
G-MicroNFT treats Investor's Securities as its own value in order to prevent Fraud.

It does not carry out any principal out-of-wallet transfers and its securities remain stable on the global digital currency exchange.

H-Manipulation does not generate a different extension key cloning and API that will endanger the investor's personal information and security, as well as additional advanced security operations as a result of throwing Keylogger on leverage operations.

After the K-Corporate Offer, IT Companies who want to make a Request for MicroNFT should be informed by arranging a News or conversation on their official site for the security and references of microNFT users and digital currency holders, from the age that has not changed as a result of the Agreement and Legal purchase.

Any global IT companies, whenever L-MicroNFT wants to expand and update in the Metaverse Space.
MicroNFT is not responsible for problems caused by ETHERNET network.
The MicroNFT Social Group is not for setting up, telecommunicating, Grouping and coming up.
MicroNFT Developed New digital world can be seen as the Painter's booklet.

About:

Users are deemed to have accepted these terms when they purchase MicroNFT digital currency.
It is forbidden to work in the MicroNFT area of transactions that will not purchase MicroNFT and perform other transactions.
Comply with personal data protection laws and European Union Standards and Global Societies protection laws
It is Prohibited.
